SUMMARY

Sydney-based Full-Stack Engineer with 3+ years of experience building customer-facing web applications and production software using React, TypeScript, Python, and Node.js. Experienced in delivering frontend interfaces, backend services, API integrations, data access controls, and cloud-based workflows, including AI-powered products and conversational agents. Strong across the full software development lifecycle, including requirements analysis, database design, testing, CI/CD, release planning, and cloud-based delivery.

TECHNICAL SKILLS

Frontend:	React, TypeScript, JavaScript, Next.js, GraphQL, Axios
Backend:	Python, Flask, FastAPI, Node.js, NestJS, REST APIs, JWT
Database:	PostgreSQL, SQL Server, Azure Cosmos DB, Redis
Cloud & DevOps:	Azure Functions, Azure DevOps Pipelines, AWS, Docker, Git, GitHub Actions
AI & Automation:	AI Agents, Tool Calling, RAG, Prompt Engineering, Workflow Automation

WORK EXPERIENCE

Software Engineer - Kimia (Sydney, Australia)

Jun 2026 - Present

- Built Access Data Scopes for Kimia's chemical intelligence platform, a row-level access control layer that determines which products and documents each user and AI assistant can access, with consistent enforcement across the application and public APIs.
- Designed the organisation module access and entitlement system, defining which platform modules and roles are available to each customer organisation and product tier, with administrative controls and database-backed configuration.
- Built the notifications platform end to end, including an event-driven strategy pipeline, BullMQ daily and weekly digests, per-user email limits, Resend idempotency, and PostHog engagement telemetry across in-app and email channels.
- Developed the Ask Kimia LLM agent and Concierge assistant across the NestJS orchestration layer and Python FastAPI AI service, including agent tools, run lifecycle and failure recovery, and server-side resolution of assistant capabilities.

Key Achievements:

- Delivered Access Data Scopes from design to production within a month, enabling customers to manage multiple departments in a single workspace with controlled access to shared products and documents, without duplicating workspaces or data.
- Built a notification system serving 30+ in-app and email topics across customer workspaces, with daily and weekly digests and per-user email rate limiting.

Software Engineer - Axify.AI (Sydney, Australia)

Nov 2024 - Jun 2026

- Built the customer-facing portal for AI agents, enabling users to configure their agents and view analytics, using React, TypeScript, Axios, Python, Flask, FastAPI, SQL Server, and Azure Cosmos DB.
- Built an agent configuration pipeline that translates customer settings into runtime configuration through APIs and Azure Cosmos DB, supporting agent workflows, FAQs, voice, and booking rules.
- Built an automated call analytics pipeline using Azure services and AI classification, turning agent conversations into searchable call records and customer-facing insights.
- Built Python conversational AI agents for calls and messages, combining LLM-based intent detection with multi-turn workflows for bookings, changes, cancellations, FAQs, and human handoff.

Key Achievements:

- Replaced manual CSV configuration updates with self-service settings, reducing customer turnaround time for agent configuration changes from days to seconds.
- Built conversational AI systems that handled 31K+ calls, 3K+ bookings, and 3K+ SMS events in a monthly production reporting period.

Software Engineer - AI Consulting Group (Sydney, Australia)

Mar 2024 - Nov 2024

- Developed a delivery platform for a client project, including admin interfaces and reporting dashboards, using React, TypeScript, Axios, Next.js, Node.js, and GraphQL.
- Built GPT-powered automation tools to generate articles for client websites and optimize SEO, and contributed to website UI improvements.

Key Achievements:

- Automated article generation for client websites using GPT-powered workflows, reducing manual content creation.
- Supported improvements to client websites through SEO automation and UI updates.

Software Engineer - Thick AI (Remote, China)

Sep 2023 - Mar 2024

- Built a clinical decision-support web application using Python, Flask, and JavaScript, enabling users to upload clinical data, select machine learning models, and view prediction results.
- Contributed to backend development for data handling, RESTful API support, model training, and prediction-related workflows, supporting AI and ML-oriented application use cases.
- Worked with structured datasets, file-based inputs, client-server communication components, and Docker-based containerization to support application logic and model-related processing.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals
- Microsoft Certified: Azure Administrator Associate
- Microsoft Certified: Power BI Data Analyst Associate

EDUCATION

- Master of Information Technology (Artificial Intelligence), University of New South Wales
- Bachelor of Computer Science, Yancheng Institute of Technology
